

Sandpebble NT Testimonials

Description:

Sandpebble NT™ and Sandpebble Fine NT™ finishes are 100% acrylic-based textured finishes that are offered in standard colors and custom colors. NT Finishes exhibit excellent application properties and blister resistance and floating is faster because the finish does not pick up quickly on the float. NT Finishes provide an effective, efficient finishing touch with a distinct, sharp, 3-dimensional texture. NT Finishes incorporate the same improved dirt pickup resistance technology used in all Dryvit DPR finishes. Dryvit PMR (Proven Mildew Resistance) is also available.

What Others are saying....

“We achieve a better look when using Sandpebble NT, which results in less call-backs. We are now able to use less experienced applicators (at a lower hourly rate) to float the finish. With Sandpebble NT, there are no cold joints. Before it was developed, we could not have done this. We save hundreds of dollars a week using less experienced applicators.

When we combine all of the Faster To The Finish products, we are able to do our jobs at a much faster rate, saving thousands of dollars each month!”
